

RELEASE NOTES

Firmware-Ver 3.92 [13th May, 2020]

Media Server

- Fully renewed for 'MinimServer''SongKong'
- New Menu 'Media Server App'
'TwonkyServer' 'MinimServer' 'Off' are available.
- *As [MELCO Localplay] front panel USB-DAC playback depends on TwonkyServer, it will be disabled when set to other than TwonkyServer. 'MinimServer' requires internet connection for initial installation. MinimServer version installed is MinimServer 2 Starter Edition [free version with limited functionality, paid upgrade available].
For details, see the: minimserver.com/minimserver2/melco page.
- 'Rescan Songs and Playlists' also works for MinimServer
- 'Configure MinimServer' menu presents URL for Web Configuration.
- 'Version Check' menu helps updating MinimServer independently from MELCO System Software.

→New Menu 'SongKong'

- 'SongKong' requires internet connection for initial installation (as Lite version)
- 'SongKong Service' disables/enables resident SongKong service.
- 'Configure SongKong' menu presents URL for controlling SongKong via a web browser.
This includes upgrade path to full version.
- 'Version Check' menu helps update SongKong independently from MELCO System Software.

→What is 'MinimServer'

- Alternative UPnP AV Media Server Software dedicated to serve music (not for Movies/Photos)
- Now MinimServer is 'recommended server' to use with various players such as dCS, Esoteric.

→What is 'SongKong'

- It gathers/maintains detailed metadata for tracks including artwork inside MELCO using online databases. Unlike Gracenote, SongKong works for all files installed. SongKong Lite creates a preview detailed report showing the metadata that can be added, to save the changes requires a full Melco license. SongKong Lite also provide the capability to manually edit track metadata on the web browser.

Status

- 'Music Database' shows MinimServer status when 'MinimServer' selected.
- 'Media Server' shows MinimServer version when 'MinimServer' selected.

Import from CD

- Bugfix regarding specific character of metadata stops importing as error

USB-DAC Local Player

- Support for 2GB-4GB WAV files again *FW 3.90-3.91 treats WAV files 2GB-4GB as 'suspicious' because most of old WAV files indicates 2GB-4GB are actually broken.
But now there is a demand to play large WAV files on MELCO so we remove this limit again.
- Devices added for MELCO marker-less DSD
Mark Levinson No508x, PRIMARE I15, Ayre QB-9 twenty etc.

Downloader

- [OTOTOY] Retry within the session added when bought files are not ready on site.
- [mora] Support for requirement update.
